The Meaning of Geography to Me

Geography is, to me, the science that can predict the types of activities one may do, the evolution of a certain society and the equilibrium of a natural ecosystem, depending on the area's location on the globe.

Impact of iGeo Preparation on my Life

The preparation for iGeo clearly helped me become a more organised person, but more than anything it aided me in learning how, in a given problem, all of its subsystems interact with one another to give a certain effect. I can say that iGeo helped me to view real-life problems in such a way that I can, by analyzing each of the factors that contribute to the situation, explain the given phenomenon.
